1. Professional Summary

Lead Software Engineer with 15+ years of experience designing and leading development of high-performance, fault-tolerance scalable trading and fintech systems. Proven expertise in Java backend engineering, distributed systems, and blockchain applications. Experienced team lead and project manager with a track record of delivering mission-critical financial platforms for global markets. Eligible to work remotely for U.S. companies from Canada (no visa required for remote).

2. Experience

Senior Software Engineer (Independent Contractor) | Mercor (Remote)

Nov 2025 – Present

- Contribute as an independent contractor helping world-leading AI labs train and evaluate advanced models on senior-level software engineering and problem-solving tasks.

Lead Software Developer/Team Leader | GMO-Z.com Fintech CA, Vancouver

Nov 2024 – Sep 2025

- Led a backend engineering team delivering trading system for 1M+ clients (one of top 5 on Japanese market), improving scalability and reliability through high-performance Java components.
- Improved system maintainability by raising test coverage by 20% and streamlining documentation, reducing onboarding time for new engineers.
- Boosted team productivity by integrating Generative AI tools (ChatGPT, Cursor AI) into daily workflows, accelerating prototyping and troubleshooting.

VP / Director of Software Development / Lead Software Developer | CardinalChain Software Inc, Vancouver

Apr 2019 – Nov 2024

- Directed engineering and product development for enterprise-scale crypto trading platforms serving 1M+ users, ensuring reliability and regulatory compliance.
- Improved system throughput by 25% by introducing a transactional cache for trading data, significantly reducing database load and latency under high transaction volume.
- Mentored and managed a team of developers, improving delivery speed and overall team productivity through better code review practices and agile coordination.

Senior Software Developer | FitechSource Saint Petersburg Ltd.

Nov 2003 – Apr 2019

- Developed trading systems for the Japanese financial market, including CFD and blockchain integration (BTC, ETH), ensuring low latency and high transaction reliability.
- Built a prototype in-memory database (H2 → Oracle replication) that boosted data access speed while maintaining full persistence and consistency.
- Built a cached JDBC driver wrapper enabling seamless integration into existing Java systems, reducing database load and data access time.
- Developed reusable enterprise Java services as part of xTier middleware, reducing development time and code duplication for multiple internal applications.

Software Engineer | Borland Software AG / Togethersoft Labs Inc, St. Petersburg

Jan 2001 – Sep 2003

- Implemented UML-to-XML import/export using XMI standards, enabling seamless model interoperability for JBuilder and Together IDE.

QA Engineer/Software Developer | ZAO Comita, St. Petersburg

Aug 1999 – Dec 2000

- Improved QA process by automating testing for banking and supervisory systems.

3. Education

- M.Sc., Microcomputer & Network Software – St. Petersburg Technical State University, Russia (1999)

4. Technical Skills

Languages & Frameworks: Java, C#, VBA, Go, Spring, SpringBoot, Maven, Gradle, Servlets, XML, Python

Databases: MySQL, Oracle, PostgreSQL, HSQL, Redis, JDBC, NoSql

Systems & Platforms: Tomcat, JBoss, WebLogic, Rabbit MQ, Kafka, AWS

Tools: Git, BitBucket, Jenkins, Junit, IDEA, Eclipse, Redmine, Jira, Confluence, CI/CD, Grafana, DataDog, Docker, Kubernetes

Finance & Blockchain: Blockchain (BTC, ETH), Forex, FIX

Emerging Tools: AI-assisted coding (ChatGPT, Claude, Cursor AI), ML concepts (Scikit-Learn, TensorFlow basics)

Other: Leadership and management, high performance fault tolerant distributed systems, code-review, documentation
