SUMMARY

Software engineer with 7 years of experience in development of complex software applications and a master's degree in Computer Science. Certified AWS developer.

As a Senior Engineer, I drive the full development lifecycle — including planning, design, implementation, testing, and deployment.

EXPERIENCE

T-Systems Iberia – Reus, Catalonia, Spain

Senior Software Engineer (September 2023 – Present)

- Develop high-loaded applications for the network monitoring systems, using Java applications
- Design and implement microservice architecture
- Increase throughput using concurrent applications
- Using asynchronous programming tools: event-based flows, reactive programming, task queues, message queue (Kafka)
- Cloudification of legacy Java applications
- Integrations with external systems
- Implementation of UI
- Creating and configuring databases
- Deploy applications to cloud using GitOps approach
- Containerization and orchestration of applications using Kubernetes and Helm
- Writing API documentation

Key technologies: Java 21, Spring Boot, Project Reactor, Node.js, PrimeVue.js, TypeScript, Prometheus, GitLab, Kafka, Docker, Kubernetes, Helm, Rancher, Flux, SOPS, cloud systems.

GlobalLogic – Krakow, Poland

Full Stack Software Engineer (January 2022 – September 2023)

Developed Java applications, based on event-driven microservices architecture (SAGA).

OTA project

- Application level: Java 11, Spring Boot
- Persistence level: Postgresql, Hibernate, JPA, Spring Data
- Containers: Amazon Elastic Kubernetes Service (EKS), Kubernetes, Docker
- Storage of large files: AWS S3
- DevOps: GitLab, Jenkins
- ELK Stack - log monitoring
- Kafka - asynchronous communication between internal services (Amazon MSK)
- Redis Streams - asynchronous communication between internal services (Spring Data Redis)
- Integration with other service via GraphQL API and REST API
- Mqtt - send messages (notifications) to vehicles (eclipse paho library)
- Mqtt - receive messages from vehicles (eclipse paho library)
- Security - Keycloak, SSO, OAuth2 (Spring Security)

Vehicle simulation project

- Application level: Java 11, Spring Boot
- Containers: Amazon Elastic Kubernetes Service (EKS), Kubernetes, Docker
- Persistence level: Spring Data, AWS RDS
- Storage of large files AWS S3 (AWS SDK library)
- ELK Stack - log monitoring
- DevOps: GitLab, Jenkins
- LWM2M client (implementation based on open source Leshan project)
- Integration with other service (REST, FeignClient)
- Mqtt client - producer (eclipse paho library)
- Implementation of encoder library (message encoder according to given protocol specification)
- Kafka - asynchronous communication between internal services
- Security - Keycloak, SSO, OAuth2 (Spring Security)

Contribution to the internal project - a self service portal which holds the information on

technical growth and helps manage it. Tech stack: Java 11, Spring Boot, Mongo DB, React.js, Jenkins.

Mentoring junior specialists.

Masterdata – Moscow, Russia

Full Stack Software Engineer (March 2021 – December 2021)

- Developed retail management systems for e-commerce, using Java applications
- Used SpringBoot and domain-driven approach to build services
- Implemented REST APIs for communication between services

- Implemented concurrent tasks to handle huge amount of events
- Deploy applications on SAP Cloud
- Implemented frontend tasks
- Collaborations with different teams
- Writing API documentation

Infrastructure: SAP Cloud

DevOps tools: GitLab, Jenkins, Docker

Application level: Java 8-11, Spring Boot, Kotlin, concurrency, REST services, Spring Security

Persistence layer: Spring data, PostgreSQL

Monitoring and metrics: Prometheus, Grafana, Spring Cloud Eureka

Rostelecom – St. Petersburg, Russia

Full Stack Software Engineer (August 2020 – March 2021)

- Developed and maintained full-stack Java applications for online medical systems in public healthcare,
- Implemented monolithic architecture services and JavaScript-based frontend
- Configured MySQL database
- Implemented RESTful APIs for communication with frontend
- Implemented frontend tasks for UI
- Implemented Junit tests

Key technologies: Java 11, Spring Boot, Hibernate, MySQL, Jenkins, [Node.js](#)

IGA Technologies – Moscow, Russia

Java Developer (September 2019 – July 2020)

Developed backend applications for managing nuclear power plant components, ensuring accurate lifecycle management based on defined configurations:

- Implementation monolithic architecture based on Java EE and SpringBoot services
- Implementation of graph-type relationship entities in Java
- Implementation of REST APIs
- Integration with Oracle database
- Integration with UI
- Wrote Junit tests
- Implemented Swagger documentation

Technologies: Java 8, Java EE, JUnit, Moc Spring Framework, JS, Hibernate, Oracle, REST, HTTP, SSL, Linux

Sberbank – Saint-Petersburg, Russia

Junior Java Developer (March 2019 – September 2019)

- Developed and maintained backend services for banking applications
- Implemented Java services in monolithic architecture application
- Implementation of services for generation and processing Excel, PDF and archive files
- Implementation of REST services
- Integration with JavaScript UI
- Implementation of SQL tasks
- Configuration of Oracle database
- Implementation of JUnit tests
- Deployment applications to WebSphere

Technologies: Java 8, Spring, Hibernate, REST API, Oracle SQL, Jenkins.

EDUCATION

Peter the Great St. Petersburg Polytechnic University

Master's Degree, Computer Science

September 2016 – January 2019

St. Petersburg State University of Civil Aviation

Bachelor's Degree, Engineer of Air Navigation

September 2009 – July 2014

CERTIFICATIONS

- [AWS Certified Developer – Associate](#)
 - [Oracle Database SQL Certified Expert](#)
-

CORE SKILLS

- Java, Spring Boot, Spring Security, Spring Data, Spring Cloud, Hibernate, Maven, JUnit, Mockito
- Project Reactor (WebFlux)
- SQL databases: PostgreSQL, Oracle
- NoSql databases: MongoDB, Redis

- **CI/CD: Jenkins, SonarQube, Flux, SOPS**
 - **Docker, Linux Oracle**
 - **Kubernetes, Helm**
 - **Kafka**
 - **AWS services (EKS, MSK, S3, RDS, EC2)**
 - **ELK Stack**
 - **Prometheus, Grafana**
 - **Microservices, event-driven architecture, SAGA pattern**
 - **REST API, HTTPS, WebSocket**
 - **OAuth, TLS, LDAP**
-

LANGUAGES

- English (professional)
- Russian (native)
